
ject Handling
crafted attack payloads through the settings merge in app.js.
k wrote onto Object.prototype — the global pollution that
dmin. The harness scrubs the prototype after each test, so the
he per-payload log.
Object.prototype (proto-attack, nested-attack), so an
pplySettings(): null-prototype base, a key guard at
reviver.

top
[verify] ATTACK REPRODUCED — a crafted payload wrote onto Object.prototype (proto-attack, nested-attack), so an unrelated {} now inherits isAdmin/polluted. Fix applySettings(): null-prototype base, a key guard at EVERY level, own-key reads, and an optional parse reviver.
verify.js:78
[verify] valid -> no pollution
verify.js:79
[verify] proto-attack -> POLLUTED Object.prototype
verify.js:79
[verify] nested-attack -> POLLUTED Object.prototype
verify.js:79
[verify] prototype clean after run -> yes
verify.js:79
